DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 05 March 2007 has been entered.

Response to Arguments

2. Applicant's amendments and arguments, filed on 01/18/2007, with respect to claims 1-3, 5-8, 10, 11 and 13 have been fully considered but they are not persuasive. The Examiner has thoroughly reviewed Applicants' arguments but firmly believes that the cited reference to reasonably and properly meet the claimed limitations.

Independent Claims 1, 6 and 11

(1) *Applicants' argument* – "Claims 1-3, 5-8, 10, 11 and 13 are pending. Claims 1, 6 and 11, which are independent, are amended. Support for the amendment is provided in the Specification, specifically on pages 14-16. No new matter has been introduced by this amendment." as recited.

Examiner's response – Page 14-16 of the instant application **does not teach** the amended limitation "scrambling said first broadcast signal or said second broadcast signal" as recited.

Page 14, lines 19-23, describes a DSS broadcast signal input from the antenna 2 in the front end circuit 11 (Fig.2) of the set top box 1, the scrambled broadcast signal is released in the descramble circuit 12 (Fig.2), wherein the scrambled broadcast signal is scrambled at transmitter side but not in the front end of the receiver side that is well known in the art. The instant application teaches that the input DSS broadcast signal (front end input 11, Fig.2) is a scrambled DSS broadcast signal and it can be descrambled by the descramble circuit 12.

Page 16, lines 2-9, described the same operation as addressed in the above paragraph for a ground digital broadcast signal.

Thus, for the explanation addressed in the above paragraph, the rejection under 35 U.S.C. 112, first paragraph, with respect to claims 1-3, 5-8, 10, 11 and 13 as failing to comply with the written description requirement is adequate since the claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

4. Claims 1-3, 5-8, 10, 11 and 13 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

- The amended limitation "scrambles said first broadcast signal or said second broadcast signal" as recited in claim 1, 6, and 11 is not supported by the original disclosure.

Page 9, lines 19-24, of the instant application, "A front end circuit 11 extracts the broadcast signal corresponding to the station selection of the user from the DSS broadcast signal input from the antenna 2, and outputs it to a descramble circuit 12. When the broadcast signal input from the front end circuit 11 is scrambled, the descramble circuit 12 releases the scrambling by using a decoding key" as recited, teaches only that the front end circuit 11 extracts the scrambled input broadcast signal and the descramble circle 12 releases the extracted scrambled input broadcast signal by using a decoding key supplied from a charging circuit 13. The front end circuit 11 only extracts the broadcast signal corresponding to the station selection of the user. There is no scrambling performed by the STB 1 (Fig.2).
